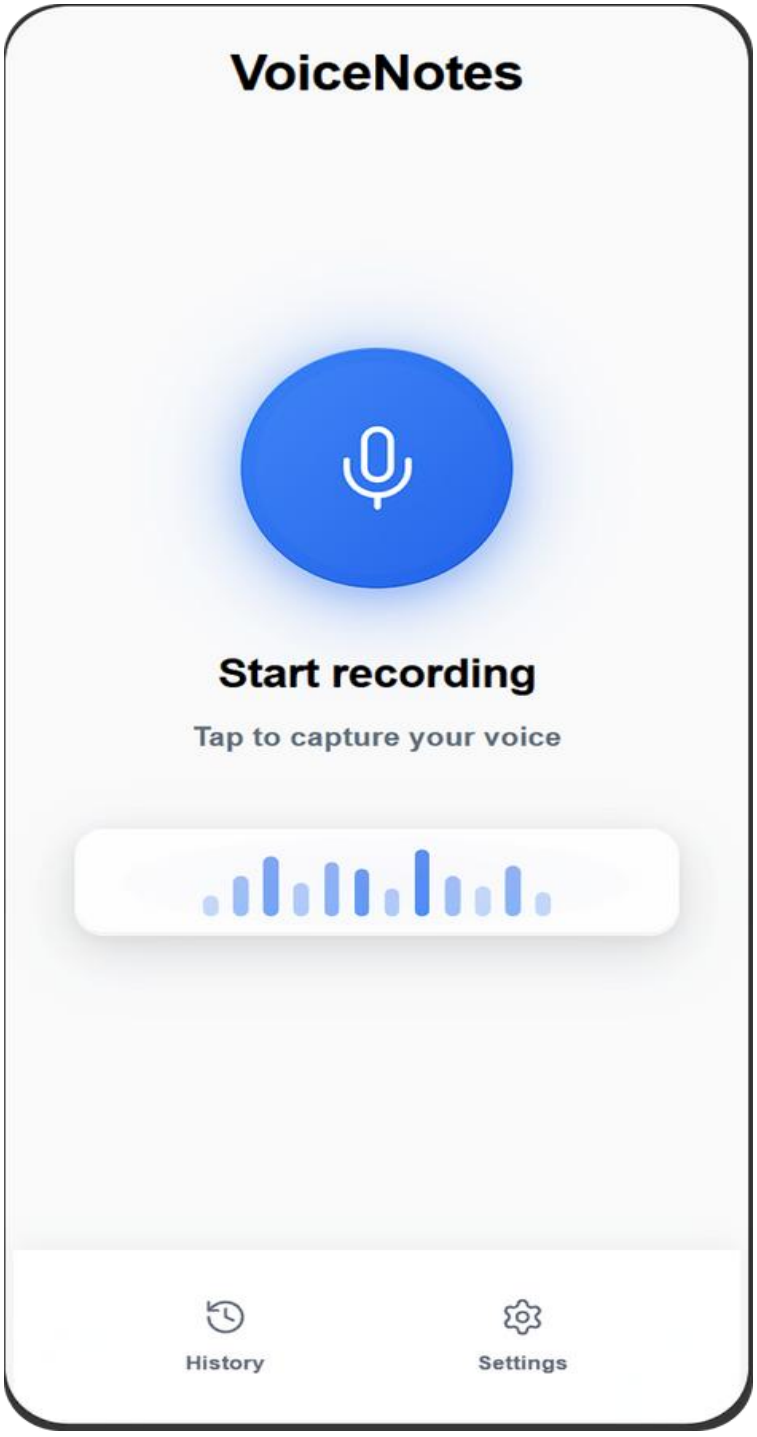
VoiceNotes AI

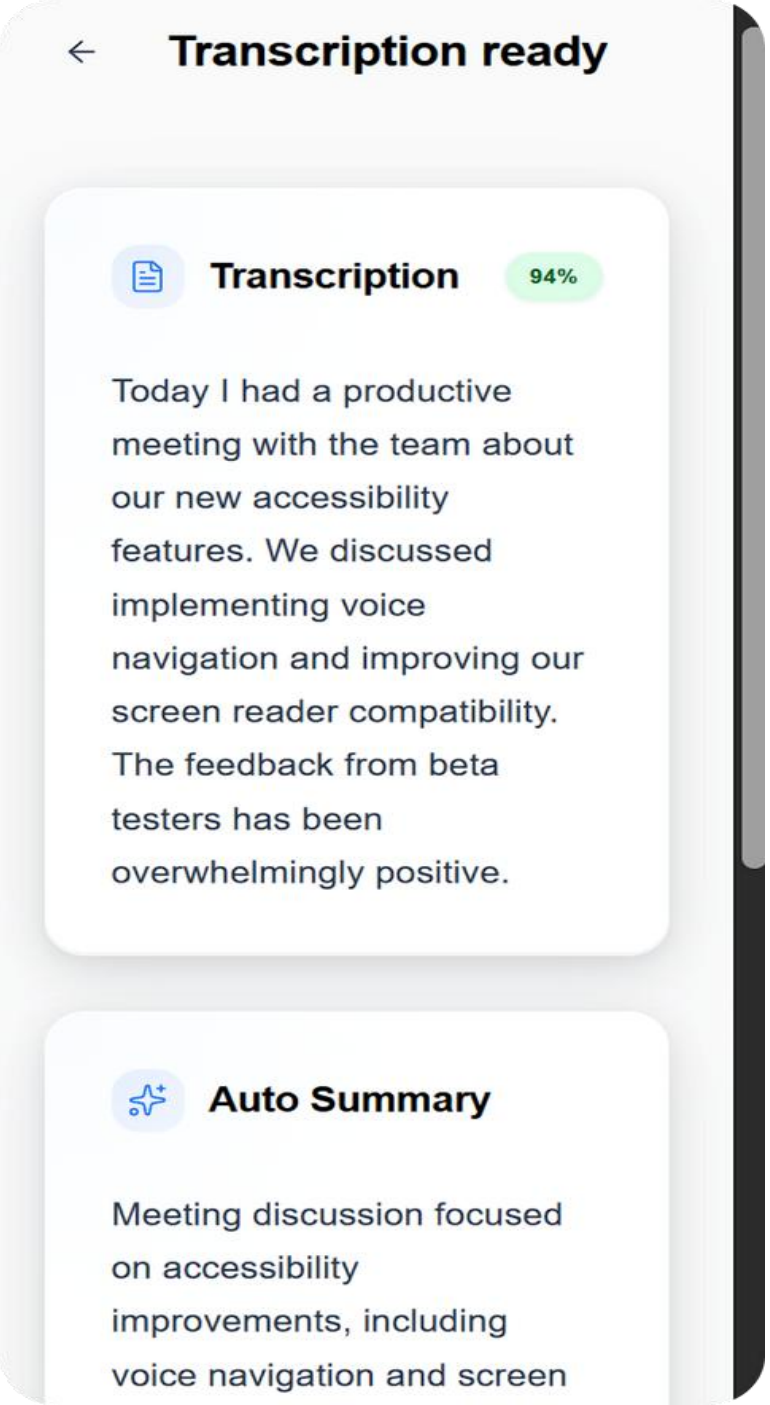
An AI-powered note-taking app for smarter, accessible learning.



Role: UI/UX Designer | Tools: Figma, Canva

Transcription Ready

Voice is instantly transcribed into editable, searchable text in real time. The interface is designed for clarity, readability, and accessibility.



Role: UI/UX Designer | Tools: Figma, Canva

Export & Settings

Easily export notes as text or PDF while keeping user privacy a priority. The app provides customizable settings, including adjustable font size, dark mode, and high-contrast themes, ensuring accessibility and comfort for all users.

Problem & Solution

Problem

Visually impaired individuals struggle to capture spontaneous verbal information and manage meeting notes effectively. Existing tools often lack accessibility features, resulting in a disconnected and frustrating user experience.

Solution

VoiceNotes AI provides an accessibility-first approach by converting voice notes into accurate transcriptions and smart summaries. Its intuitive design, combined with customizable settings, empowers users to manage communication and information independently.

Business Case Study

Target Users

Students, professionals, and visually impaired individuals who need accessible, real-time note-taking.

Market Gap

Existing tools focus on transcription but overlook accessibility and personalization, leaving many users underserved.

Value Proposition

VoiceNotes AI combines accurate transcriptions, smart summaries, and customizable accessibility features in one seamless app.

Business Model

Free basic version with premium features—AI summaries, cloud sync, unlimited exports—offered through subscription.

Impact

- Empowers independence for visually impaired users.
- Saves time and effort for professionals.
- Creates scalable opportunities in EdTech and accessibility markets.
